# **International Conference on Fish Diseases and Fish Immunology**

6-9 September 2008 | Reykjavik | Iceland

The understanding of infectious fish diseases and the causative agents, like viruses, bacteria and parasites, has been growing fast lately in the international scientific society. In parallel there is an increasing knowledge on host-pathogens interaction, including fish immunology and genome analysis of the pathogens and several fish species. The aim of the meeting is to gather scientists from Europe and other parts of the world to discuss the recent developments in the field.
